

White clover

Cultivars list

Products

Large leaved cultivars

(For rotational dairy, beef or silage systems)

Barenbrug large white clover

Kotuku

Kotuku is a high performance large leaved clover for dairy, beef and finishing systems. It provides significantly more summer and total yield. Fast establishment makes *Kotuku* ideal for oversowing clover.

Other clovers

AberNormous

Large leaved clover, providing high yields for dairy or beef systems.

Grasslands Brace

Large leaved, with high production and good cool season growth. Ideal for dairy, beef, lamb finishing and silage production.

Grasslands Legacy

High yielding large leaved white clover selected for performance in modern grazing systems. Suited to dairy or rotational grazing.

Mantra

A mid flowering white clover offering high yields, stolon density and stolon length.

Kotuku white clover was bred for faster establishment and superior growth.

Medium leaved cultivars

(For all grazing systems)

Barenbrug medium white clover

Ruru

Ruru is a new generation aggressive growing medium leaved white clover which replaces *Weka*. It grows extra dry matter in summer, with high stolon density, to provide even better animal nutrition and fix more nitrogen.

Other clovers

AberDance

Medium leaved white clover, flexible and persistent under a range of systems.

Grasslands Attribute

Medium-large leaved clover with high yield potential under a wide range of grazing managements.

Grasslands Demand

Small to medium leaved cultivar with high stolon density and good summer growth. Best suited for sheep and beef.

Grasslands Emblem

Medium leaved white clover bred for increased stolon recovery and productivity under intensive grazing systems.

Grasslands Quartz

A high yielding medium leaved white clover bred for persistence and adaptability across a range of farming systems; replacement for *Grasslands Bounty*.

Grasslands Tribute

Versatile, medium-large leaved white clover, with a high stolon density to leaf size ratio.

RGT Quest

Medium-large leaved clover suitable for multi-purpose use.

Medium-small leaved cultivars

(For set stocking & extensive systems)

Barenbrug med - small white clover

Apex

Apex is a persistent, high yielding clover. It has a high stolon density, very good drought tolerance, resistance to leaf rust, pepper spot and clover rot, and has good clover root weevil tolerance. In sheep grazing trials Apex out-yielded *Huia* by 27%, with better growth in all seasons.

Other clovers

AberLasting

Hybrid Caucasian and white clover cross, with stolons above ground and rhizomes below ground. Drought and cold tolerant with nitrogen fixation comparable to white clover.

Grasslands Nomad

Small to medium-leaved white clover bred for increased stolon recovery after summer dry.

Grasslands Hilltop

A small to medium-leaved white clover with high stolon density, bred for competitiveness in a pasture.
